OutRight® - A perfect match between proof, film or plate
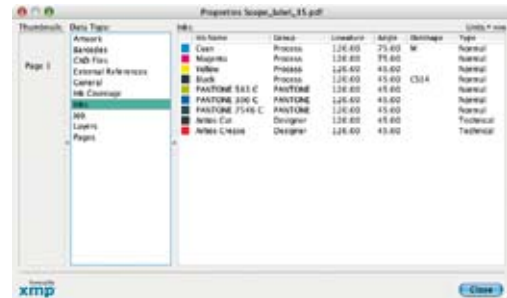

DeskPack

EskoArtwork's OutRight® and is now available with Adobe® Illustrator® and guarantees a perfect match between proof, film or plate, no matter what PDF level or PostScript RIP or imaging device is used.

OutRight ensures that transparencies, overprints, traps, vignettes, ... are rendered correctly (also when they include special inks). This new capability, unique in PDF and PostScript environments, specifically simplifies accurate proofing of complex multi-ink designs on standard four color PostScript proofing devices.

Powered by XMP

Adobe PDF documents created in Acrobat 5.0 or later contain document metadata in XML format. The Extensible Medadata Platform (XMP) provides Adobe applications with a common XML framework that standardizes the creation, processing, and interchange of document metadata across workflows. The metadata contains information such as the used CAD file, Ink coverage, barcode settings.

Features and benefits

The combination of stepX with OutRight® gives you multiple advantages:

- Powerd by XMP
- PDF 1.3, PDF 1.4, PDF 1.6, composite or separated PDF for Adobe® Illustrator® in any color space, including support for DCS spot color images
- PDF X-1a and PDF X-3a
- EPS/DCS file creation
- PostScript 1-2-3 output, composite or separated
- Object output retains full job editability (is not converted to bitmap)
- Correct rendering of job objects and attributes (transparency, traps, overprints, ink mixes)
- Enables color accurate proofing of jobs with arbitrary inks on 4/6/8 color inkjet proofers
- Results match through any standard PostScript RIP on any proofer, film or platesetter
- OPI support for Helios and Xinet FullPress®
  We support the following image formats:
  - EPS/DCS (including spot colors)
  - PSD (including spot colors and transparencies)
  - TIFF (including spot colors)
  - Esko-Graphics CT (including spot colors and transparencies)
